SUMMARY

Software engineer with 5+ years of commercial Android development experience, specializing in Kotlin / Java, MVVM, and Clean Architecture, proficient in Jetpack Compose, Coroutines / Flow, Hilt dependency injection, and Retrofit / REST API integration. Writes unit tests with JUnit, MockK, and Robolectric, runs GitLab CI (CI/CD) pipelines, and incrementally refactors legacy codebases into modular, testable architectures. Deep POS / restaurant-tech domain expertise, leading self-ordering kiosk (Kiosk), customer display (CDS), and kitchen display (KDS) products.

EXPERIENCE

Android Software Engineer · Cashier Tech

2022/08 – Present · New Taipei City, Taiwan

Collaborated in a 36+ member cross-functional team, maintaining code quality through Git / code review with 670+ commits.

Self-Ordering Kiosk (Kiosk App)

- Led payment-module refactoring, incrementally migrating Java MVP to Kotlin MVVM (ViewModel + LiveData / Flow) to cut coupling and improve testability
- Built `FonTripViewModel`, refactored `BanknoteController` refund / cash-change flows with per-note progress display, and covered refund loops and race conditions with JUnit tests
- Integrated payments and cash hardware — FonTrip vouchers, BBPOS, E.SUN / Sinopac, JKOPay, PayPal, Octopus — with multi-stage change-making and refund flows
- Built the Kiosk 3.0 Jetpack Compose design system: reusable component library with .sdp / .ssp adaptive UI guidelines; completed the AGP 8.13.2 + Kotlin 2.0 upgrade
- Introduced MockK + Robolectric unit testing for core payment, membership points, and coupon logic, wired into GitLab CI
- Integrated the Advantech POS IO SDK replacing legacy JNI serial I/O; drove USB / Serial / TCP printers and barcode scanners; maintained LAN NSD discovery with offline-tolerant sync
- Implemented categorized kitchen receipt printing (merge / split by category) and label reprint for multi-option and single KDS items
- Fixed 6 critical bugs in the home-screen video playback system, resolving freezes and unstable TextureView transparent compositing

Customer Display System (CDS 2.0)

- Led the ground-up CDS 2.0 architecture: MVVM layering with a Jetpack Compose UI, integrating Uber Eats / Foodpanda delivery platforms
- Upgraded to Compose BOM 2023.10 with the matching Gradle / AGP migration
- Adapted to Android 10+ Scoped Storage by refactoring the MediaDownloader mechanism
- Implemented a queue-seating wait board and food-court pickup notifications

POS Table Management

- Developed table merge / split-bill flows with scan confirmation, merge validation, and a full UI state machine
- Added POS tablet device support and a seating wait interface

- Refactored the e-invoice donation data flow; fixed 24-hour open / close time logic

Android Software Engineer · Zhen Ding Tech Group — BoardTek Electronics Corp.

2020/03 – 2021/09 · Taoyuan, Taiwan

Developed and maintained internal Android applications supporting production-line and operations workflows.

- Modernized a legacy Eclipse project into a modular Android Studio build with SDK modules
 - Introduced MVVM architecture and code layering conventions to cut maintenance cost
 - Built internal Android apps improving production-line and operations efficiency
 - Collected user feedback, analyzed root causes, and continuously refined app workflows
-

SKILLS

- **Languages:** Kotlin, Java
 - **Android / Jetpack:** Jetpack Compose, RecyclerView, XML Layout, ViewModel, Coroutines, Flow, Room, DataStore, WorkManager, Navigation Component, Material Design, ConstraintLayout, adaptive UI (sdp / ssp)
 - **Architecture / DI:** MVVM, Clean Architecture, multi-module, Repository Pattern, Hilt, Dagger
 - **Networking:** Retrofit, OkHttp, Gson, Moshi, WebSocket, REST API
 - **Testing:** JUnit, MockK, Mockito, Robolectric, Espresso
 - **Hardware SDKs:** Advantech POS IO SDK, banknote / change dispenser controllers, TCP / Serial printers, barcode scanners (ZXing), LAN NSD (mDNS) discovery
 - **Tools / CI/CD:** Gradle, Bitrise, GitLab CI, Docker, Firebase, Git, Jira, Android Studio
-

EDUCATION

National Formosa University · Computer Science and Information Engineering

2015 – 2019 · B.S.

ADDITIONAL INFORMATION

- **Languages:** Mandarin Chinese (native), English (fluent technical reading)
 - **Interests:** Mobile app architecture, performance optimization, developer tooling
-
